SUBJECT: Settling Tank #6 Billet Effluent

Your note of 12/23 on the results of the first cleaning of this tank was very interesting.

The flow through the tank and earlier directly to the sewer has been somewhat greater than the American Air Filter drawing indicated as a recommended bleed off of the recycle tank.

As of this morning, we installed a smaller orifice plate in the drain line which should limit the flow to about 22 GPM. The 3" valve, of course, should remain wide open.

Bill Lorenz is studying the situation now and will start taking samples regularly for analysis and determining what future steps should be taken.
